"Lack of proper books and poor data collection and data capturing mechanism creates deficiencies in management decisions"

Overview

Introduction

Effective management of employee records is vital to the survival of every organisation. Lack of proper books and poor data collection and data capturing mechanism creates deficiencies in management decisions. There are so many tools available for data (employee boi data, job records) management but we wish to introduce your organisation to the most simplest and cheaper technology, by far, – Paycount- to help you achieve optimum employee data utilisation.

"The scope covers all the modules (Setup, Transactions, Reports) of the Software"

Scope of the Software

The software covers the following activities:

1. Softwares
    a. Employee
        i. Employee Registration (Bio Data)
        ii. Salary Setup
        iii. Job Detail
    b. Statutory Report
        i. SSF 1st Report
        ii. SSF 2nd Report
        iii. PAYE Report
    c. Payroll
        i. Payroll Statement
        ii. Loan Management
        iii. Salary Advance
        iv. Bank Advice
        v. Payslip
2. Training
    a) Payroll Team

"The critical stage of the project is the implementation stage"

Implementation Activities

1. **Analysis of current situation**: Our project team will liaise with the representative of the organisation to critically analyze the existing procedure for capturing payroll data and also examine the current computer infrastructure including data for import and prepare a work plan for implementation.

2. **Installation of Software**: We will install and configure the software on all client's computers dedicated for this project. We will also re-configure the client's existing network infrastructure to enable data and resource sharing. Configuration of user privileges will done at this level so that not everybody will have access to anything.

3. **Training**: All the staff responsible for payroll activities will be thoroughly trained on how to capture data, generate reports, etc.

4. **Handing Over**: We will hand-over the system to the client to continue implementation. We will again organize a brief meeting with stakeholders to brief them on work so far and re-echo the correct practices for the software.

5. **Signing of Agreement**: It is our policy to provide free-one-month post implementation support for clients. After the one month, the client is

supposed to commit to pay an amount of ***US$100.00*** *per month or pay per service,* for software support and maintenance.

"This outline our professional and ethical roles and responsibilities"

Our Responsibilities

1. It is our responsibility to provide the client effective software and technical team to support implementation.

2. It is our responsibility to deliver the software to the satisfaction of the client. To provide accurate training to enable effective use of the software.

3. It is our policy to offer one month post implementation support free of charge. However, we will charge a monthly technical support/maintenance fee of either ***US$100.00***. Support can be on phone, via internet and on-site visit. We advise the client have a reliable internet to speed up our response time. The Client bear the full cost of data recovery and any damaged caused by their negligence even during the one month free post implementation support. Technical Support is optional. It is our responsibility to be available in times of distress. To be able to reduce system down times. Our support system will be by phone call, remote access and/or physical visit on client site.

Client's Responsibilities

"This outline the client professional and ethical roles and responsibilities"

1. The client will sign a software support agreement with before technical support will be delivered after the initial free-three month post implementation support.

2. The client will bear the full cost of data recovery and any cost arising out of negligence on the part the client's representatives even during the free support period.

3. The client will not allow anybody, apart from our designated person or those trained by us to work on the software and the computer. The client notifies us by phone, text message or e-mail any time they encounter any issue.

4. The client must have reliable internet connectivity to enable quick response to technical problems
